Zscaler (ZS) Unveils Industry's First Zero Trust AI-Powered SASE

January 24, 2024 — 09:32 am EST
Written by Zacks Equity Research for Zacks →

Zscaler ZS unveiled the Zero Trust Secure Access Service Edge (SASE) and announced the general availability of its Zero Trust software-defined wide area network (SD-WAN) solution. The new Zscaler solutions reflect an improvement over the traditional network and firewall architectures. These solutions are built on a Zero Trust architecture that prevents ransomware attacks by blocking lateral threat movement.

Zscaler Zero Trust SASE is the industry's first single-vendor SASE solution, which is built on the company's Zero Trust AI. It helps organizations cut down on costs and simplify security by implementing the Zero Trust measures for users, devices and workloads.
