

Entitle

Cut off attack paths by eliminating always-on access and maintaining a seamless experience for users.

Basic identity management approaches are breaking under pressure. Always-on access and outdated privilege controls have made it easy for attackers to exploit accounts, especially with AI helping them launch smarter phishing campaigns, extract data faster, and find hidden paths to escalated privileges.

Static access is the weak link, and it's putting organizations at risk.

Security and IT teams are trapped between enforcing strict controls and enabling productivity. Manual access requests, growing ticket queues, and narrow privilege scopes slow the business down and lead admins and users to seek workarounds that weaken security posture. Meanwhile, compliance requirements are growing more complex and demanding more oversight, visibility, and control into who can access what, when, and why.

Entitle solves these challenges with policy-driven, just-in-time access workflows that are context-aware and ephemeral. Entitle automates access reviews and integrates with your entire stack. Reduce the risk of lateral movement and gain control without slowing down the organization.

Key Security Outcomes

Eliminate Standing Privileges for User Identities in Any Environment

Entitle eliminates risky standing privileges across all environments by automatically revoking access based on policy, from time-bound rules to identity threat signals. It reduces breach exposure without manual effort.

Obtain Privilege Sprawl Visibility

Entitle provides unified visibility and governance across complex SaaS, IaaS, PaaS, and on-prem environments. Entitle can identify external privilege escalations and alert admins for immediate revocation of unsanctioned privileges.

Automate Access Reviews and Continuous Compliance

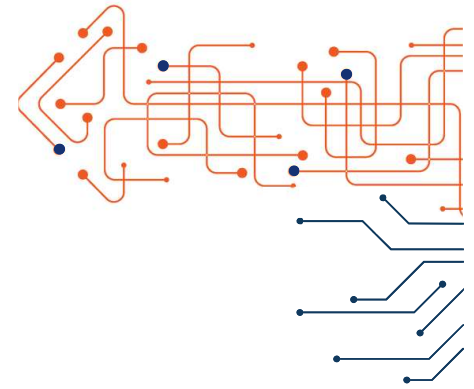

Entitle directly integrates compliance management into daily operations. Automated evidence collection, reporting, and built-in audit trails ensure organizations stay continuously compliant, reducing the risk of non-compliance penalties and expensive remediation efforts.

Implement Control Without Productivity Compromise

Entitle enhances security without compromising efficiency. By eliminating manual ticket-driven workflows and unnecessary friction from traditional security controls in IAM, Entitle ensures smooth user experiences, reducing risky workarounds and maintaining productivity.

Simplify Operations and Reduce IT Burden

Entitle significantly reduces the operational burden placed on IT and Security teams. By automating access requests, troubleshooting, and revocation processes, Entitle frees your team to focus on strategic initiatives rather than being bogged down by service desk tickets.

Client Success Stories

SaaS, TECH, SECURITY

NoName Security

"I like Entitle because it's one of those tools I can set up and forget about. I never have to go into it and it just works."

- Mike Morrato

CISO and Global Head of IT

SECURITY

Sourcegraph

"Entitle's scalability, maturity, and ability to audit permissions at a point in time made it a better solution than other competitors Sourcegraph had evaluated. Entitle is able to read resources across all projects and dynamically picks up on new resources added to our systems."

- Mohammad Alam

Security Engineer

SaaS

Starburst

"We initially considered building an in-house solution, but Entitle's affordability, ease of use, and comprehensive feature set made it the obvious choice. It not only saved us on additional staffing but also seamlessly integrated into our existing systems."

- Shane Dizer

Security Engineering Manager
